

**AMENDMENTS TO THE CLAIMS**

1. (Original) A grease composition for lubricating a rock bit for drilling subterranean formations or for lubricating a high temperature bearing, the grease comprising:

a high viscosity index polyalphaolefin base fluid, wherein the polyalphaolefin contains an average of 30 to 100 carbon atoms, a branching ratio of less than about 0.19, and an average side chain length of 8 or more carbon atoms, wherein the high viscosity index polyalphaolefin base fluid comprises from about 15 wt. % to about 85 wt. % of the grease composition;

an additional base fluid selected from the group consisting of monosubstituted alkyl naphthalenes, polysubstituted alkyl naphthalenes, and mixtures thereof, wherein the alkyl comprises from about 16 to about 30 carbon atoms, wherein the additional base fluid comprises from about 15 wt. % to about 85 wt. % of the grease composition;

an ester base fluid, the ester comprising from about 5 to about 20 carbon atoms, wherein the ester base fluid comprises from about 0.5 wt. % to about 5 wt. % of the grease composition;

a metal complex soap, the soap comprising a residue of one or more fatty acids comprising from 2 to 22 carbon atoms, wherein the metal is selected from the group consisting of calcium, lithium, sodium, barium, titanium, and mixtures thereof, wherein the metal soap comprises from about 5 wt. % to about 45 wt. % of the grease composition;

an antioxidant, wherein the antioxidant comprises from about 0.2 wt. % to about 2 wt. % of the grease composition;

a metal deactivator, wherein the metal deactivator comprises from about 0.1 wt. % to about 1.5 wt. % of the grease composition;

an antiwear agent, wherein the antiwear agent comprises from about 0.1 wt. % to about 15 wt. % of the grease composition; and

a bismuth oxide extreme pressure additive, wherein the bismuth oxide extreme pressure additive comprises from about 1 wt. % to about 20 wt. % of the grease composition.

2-3. (Canceled)

4. (Currently amended) The grease composition of claim 2 34, wherein a number average molecular weight Mn of the high viscosity index polyalphaolefin is from about 3400 to about 22000.

5. (Currently amended) The grease composition of claim 2 34, wherein the grease comprises from about 20 wt. % to about 50 wt. % of the high viscosity index polyalphaolefin.

6. (Currently amended) A grease composition for lubricating a rock bit for drilling subterranean formations or for lubricating a high temperature bearing, the grease comprising a high viscosity index polyalphaolefin, wherein the high viscosity index polyalphaolefin has a branching ratio of less than about 0.19 The grease composition of Claim 31, further comprising a naphthalene substituted by an alkyl group.

7. (Previously presented) The grease composition of claim 6, wherein the naphthalene is substituted by a single alkyl group.

8. (Original) The grease composition of claim 6, wherein the alkyl group comprises from about 16 to about 30 carbon atoms.

9. (Original) The grease composition of claim 6, wherein the grease comprises from about 30 wt. % to about 80 wt. % of the naphthalene substituted by an alkyl group.

10. (Currently amended) The grease composition of claim 2 34, further comprising an ester base fluid.

11. (Original) The grease composition of claim 10, wherein the ester comprises from about 5 to about 20 carbon atoms.

12. (Original) The grease composition of claim 10, wherein the grease comprises from about 0.5 wt. % to about 5 wt. % of the ester base fluid.

13. (Currently amended) The grease composition of claim 2 34, further comprising a metal complex soap.

14. (Original) The grease composition of claim 13, wherein the metal complex soap is derived from a fatty acid comprising from about 2 to about 22 carbon atoms.

15. (Original) The grease composition of claim 13, wherein the grease comprises from about 5 wt. % to about 45 wt. % of the metal complex soap.

16. (Original) The grease composition of claim 13, wherein the metal is selected from the group consisting of alkaline earth metals, alkali metals, Group IIB metals, Group IIIA

metals, Group IVA metals, Group VA metals, Group IVB metals, Group VB metals, and mixtures thereof.

17. (Original) The grease composition of claim 13, wherein the metal is selected from the group consisting of lithium, sodium, potassium, magnesium, strontium, barium, aluminum, titanium, bismuth, and mixtures thereof.

18. (Original) The grease composition of claim 16, wherein the metal comprises calcium.

19. (Original) The grease composition of claim 16, wherein the metal comprises a compound selected from the group consisting of metal hydroxides, metal oxides, metal isopropoxides, and mixtures thereof.

20. (Currently amended) The grease composition of claim 2 34, wherein the grease comprises a non-soap thickener.

21. (Original) The grease composition of claim 20, wherein the non-soap thickener selected from the group consisting of a polyurea thickener, a silica gellant, a polytetrafluoroethylene, a clay, and mixtures thereof.

22. (Original) The grease composition of claim 20, wherein the grease comprises from about 3 wt. % to about 40 wt. % non-soap thickener.

23. (Currently amended) The grease composition of claim 2 34, further comprising from about 0.2 wt. % to about 2 wt. % of an antioxidant.

24. (Currently amended) The grease composition of claim 2 34, further comprising from about 0.2 wt. % to about 2 wt. % of a phenolic antioxidant.

25. (Currently amended) The grease composition of claim 2 34, further comprising from about 0.2 wt. % to about 2 wt. % of an amine antioxidant.

26. (Currently amended) The grease composition of claim 2 34, further comprising from about 0.02 wt. % to about 1.5 wt. % of a metal deactivator selected from the group consisting of substituted benzotriazole, derivatives of substituted benzotriazole, and mixtures thereof.

27. (Original) The grease composition of claim 26, wherein the metal deactivator consists essentially of benzotriazole.

28. (Original) The grease composition of claim 26, wherein the grease comprises from about 0.02 wt. % to about 1.5 wt. % benzotriazole.

29. (Canceled)

30. (Currently amended) The grease composition of claim 2 34, further comprising from about 2 wt. % to about 25 wt. % of a molybdenum disulfide extreme pressure additive.

31. (Previously presented) A grease composition for lubricating a rock bit for drilling subterranean formations or for lubricating a high temperature bearing, the grease comprising a high viscosity index polyalphaolefin, wherein the high viscosity index polyalphaolefin has a branching ratio of less than about 0.19, further comprising from about 1 wt. % to about 20 wt. % of a bismuth oxide extreme pressure additive.

32. (Currently amended) The grease composition of claim 2 34, further comprising from about 1 wt. % to about 30 wt. % of an extreme pressure additive.

33. (Canceled)

34. (Currently amended) The grease composition of claim 33, A grease composition for lubricating a rock bit for drilling subterranean formations or for lubricating a high temperature bearing, the grease comprising a high viscosity index polyalphaolefin, wherein the high viscosity index polyalphaolefin has an average side chain length of 8 or more carbon atoms, further comprising an anti-seize agent, wherein the anti-seize agent comprises copper powder.

35. (Currently amended) The grease composition of claim 33 34, wherein the grease comprises from about 3 wt. % to about 9 wt. % of the anti-seize agent.

36-37. (Canceled)

38. (Original) A method for lubricating a rock bit for drilling subterranean formations, the rock bit comprising a body and a plurality of cutter cones mounted, the cutter cones mounted on the body, the rock bit comprising a journal bearing in contact with a grease reservoir, the method comprising:

evacuating a portion of the rock bit comprising the journal bearing; and  
introducing a grease into the evacuated area, the grease comprising a high viscosity index polyalphaolefin, wherein the polyalphaolefin has an average side chain length of 8 or more carbon atoms.

39. (Canceled)

40. (Currently amended) The grease composition of claim 2 34, further comprising a polytetrafluoroethylene antiwear agent.

41. (Currently amended) The grease composition of claim 2, A grease composition for lubricating a rock bit for drilling subterranean formations or for lubricating a high temperature bearing, the grease comprising a high viscosity index polyalphaolefin, wherein the high viscosity index polyalphaolefin has an average side chain length of 8 or more carbon atoms further comprising a bismuth oxide extreme pressure additive.

42. (Currently amended) The grease composition of claim 6 41, further comprising an additional base stock selected from the group consisting of ethylene-alphaolefin polymer, a paraffinic mineral oil, a hydroprocessed and highly refined paraffinic base oil, and mixtures thereof.

43. (Currently amended) The grease composition of claim 6 41, further comprising a metal complex soap.

44. (Previously presented) The grease composition of claim 43, wherein the metal complex soap is derived from a fatty acid comprising from about 2 to about 22 carbon atoms.

45. (Previously presented) The grease composition of claim 43, wherein the metal comprises calcium.

46. (Previously presented) The grease composition of claim 43, wherein the metal comprises a compound selected from the group consisting of metal hydroxides, metal oxides, metal isopropoxides, and mixtures thereof.

47. (Currently amended) The grease composition of claim 6, A grease composition for lubricating a rock bit for drilling subterranean formations or for lubricating a high temperature bearing, the grease comprising a high viscosity index polyalphaolefin, wherein the high viscosity index polyalphaolefin has a branching ratio of less than about 0.19, further comprising a naphthalene substituted by an alkyl group, further comprising a copper powder anti-seize agent.

48. (Currently amended) The grease composition of claim 6, A grease composition for lubricating a rock bit for drilling subterranean formations or for lubricating a high temperature bearing, the grease comprising a high viscosity index polyalphaolefin, wherein the high viscosity index polyalphaolefin has a branching ratio of less than about 0.19, further

comprising a naphthalene substituted by an alkyl group, further comprising a polytetrafluoroethylene antiwear agent.

49. (Currently amended) The grease composition of claim 6, A grease composition for lubricating a rock bit for drilling subterranean formations or for lubricating a high temperature bearing, the grease comprising a high viscosity index polyalphaolefin, wherein the high viscosity index polyalphaolefin has a branching ratio of less than about 0.19, further comprising a naphthalene substituted by an alkyl group, further comprising a bismuth oxide extreme pressure additive.

50. (Currently amended) The grease composition of claim 6 41, further comprising a molybdenum disulfide extreme pressure additive.

51. (Currently amended) The grease composition of claim 29 A grease composition for lubricating a rock bit for drilling subterranean formations or for lubricating a high temperature bearing, the grease comprising a high viscosity index polyalphaolefin, wherein the high viscosity index polyalphaolefin has a branching ratio of less than about 0.19, further comprising from about 0.1 wt. % to about 8 wt. % of a polytetrafluoroethylene antiwear agent, further comprising an additional base stock selected from the group consisting of ethylene-alphaolefin polymer, a paraffinic mineral oil, a hydroprocessed and highly refined paraffinic base oil, and mixtures thereof.

52. (Currently amended) The grease composition of claim 29 51, further comprising a metal complex soap.

53. (Previously presented) The grease composition of claim 52, wherein the metal complex soap is derived from a fatty acid comprising from about 2 to about 22 carbon atoms.

54. (Previously presented) The grease composition of claim 52, wherein the metal comprises calcium.

55. (Previously presented) The grease composition of claim 52, wherein the metal comprises a compound selected from the group consisting of metal hydroxides, metal oxides, metal isopropoxides, and mixtures thereof.

56. (Currently amended) The grease composition of claim 29 A grease composition for lubricating a rock bit for drilling subterranean formations or for lubricating a high temperature bearing, the grease comprising a high viscosity index polyalphaolefin, wherein the

high viscosity index polyalphaolefin has a branching ratio of less than about 0.19, further comprising from about 0.1 wt. % to about 8 wt. % of a polytetrafluoroethylene antiwear agent, further comprising a copper powder anti-seize agent.

57. (Currently amended) The grease composition of claim 29 56, further comprising a molybdenum disulfide extreme pressure additive.

58. (Previously presented) The grease composition of claim 31, further comprising an additional base stock selected from the group consisting of ethylene-alphaolefin polymer, a paraffinic mineral oil, a hydroprocessed and highly refined paraffinic base oil, and mixtures thereof.

59. (Previously presented) The grease composition of claim 31, further comprising a metal complex soap.

60. (Previously presented) The grease composition of claim 59, wherein the metal complex soap is derived from a fatty acid comprising from about 2 to about 22 carbon atoms.

61. (Previously presented) The grease composition of claim 59, wherein the metal comprises calcium.

62. (Previously presented) The grease composition of claim 59, wherein the metal comprises a compound selected from the group consisting of metal hydroxides, metal oxides, metal isopropoxides, and mixtures thereof.

63. (Previously presented) The grease composition of claim 31, further comprising a copper powder anti-seize agent.

64. (Previously presented) The grease composition of claim 31, further comprising a molybdenum disulfide extreme pressure additive.

65. (Previously presented) The method of claim 38, wherein the grease further comprises an additional base stock selected from the group consisting of ethylene-alphaolefin polymer, a paraffinic mineral oil, a hydroprocessed and highly refined paraffinic base oil, and mixtures thereof.

66. (Previously presented) The method of claim 38, wherein the grease further comprises a metal complex soap.

67. (Previously presented) The method of claim 66, wherein the metal complex soap is derived from a fatty acid comprising from about 2 to about 22 carbon atoms.

Appl. No. : 10/699,237  
Filed : October 30, 2003

68. (Previously presented)The method of claim 66, wherein the metal comprises calcium.

69. (Previously presented)The method of claim 66, wherein the metal comprises a compound selected from the group consisting of metal hydroxides, metal oxides, metal isopropoxides, and mixtures thereof.

70. (Previously presented)The method of claim 38, wherein the grease further comprises a copper powder anti-seize agent.

71. (Previously presented)The method of claim 38, further comprising a polytetrafluoroethylene antiwear agent.

72. (Previously presented)The method of claim 38, further comprising a bismuth oxide extreme pressure additive.

73. (Previously presented)The method of claim 38, further comprising a molybdenum disulfide extreme pressure additive.
